

DOUBLE YELLOW

PRODUCT BIBLE

Version 2.0 | Confidential | March 2026

A community-based parking warden alert app that uses real-time GPS and crowdsourced lookouts to warn drivers before they get a ticket. The MVP is built. This document covers what we've made, how we make money, and how we win.

Phase 0	The Product — What We've Built
Phase 1	Business Model & Pricing
Phase 2	Route to Market — Marketing Strategy
Phase 3	Critical Mass — The Plan to Get There
Phase 4	Revenue Model & Growth Trajectory
Phase 5	Visual Identity & Design Language
Phase 6	Tech Stack
Phase 7	What's Next — Product Roadmap

PHASE 0

The Product — What We've Built

Double Yellow is a fully functional, launch-ready mobile application for iOS and Android. The core concept — real-time crowdsourced warden alerts — is built, tested, and working. This is not a concept. It is a product.

Core Features — Live

FEATURE	DETAIL	STATUS
"I've Parked" — Activate Mode	One-tap activation logs GPS location. App monitors in background and fires loud alert if a warden is spotted nearby.	Built
"Warden Spotted" — Lookout Mode	One-tap report captures location instantly. Optional: distance, map pin drop, and AI-verified photo for bonus points.	Built
Real-Time Alert System	Supabase Realtime websocket broadcasting via geohash grid. Alert fires within 2–3 seconds of report across any radius.	Built
AI Photo Verification	Google Vision API classifies submitted photos. Two-strike system: first failure prompts retry, second accepts without bonus.	Built
Push Notifications	Custom siren tone overrides silent mode. FCM (Android) and APNs (iOS). Fires even with screen locked.	Built
Gamification System	Points per report tier, bonus points for confirmed saves, global leaderboard, streaks, badges.	Built
Subscription Tiers	Free (unlimited, ad-supported), Basic £2.99/mo (8/month), Pro £5.99/mo (20/month), Unlimited £15.99/mo. Free tier shows interstitial ad on activation.	Built
AdMob Integration	Google AdMob interstitial ads fire on activation for free tier users. Never blocks activation — experience-first.	Built
User Profiles & Settings	Email/password auth, Apple Sign In, Google Sign In. In-app email and password update. Account tier display.	Built
Privacy Policy & Terms of Service	Live on public URL via GitHub Pages: doublyellow.github.io/DoublyYellow	Built
App Icon & Brand Assets	Final 1024×1024 icon: black background, yellow DY monogram, double yellow lines. All asset sizes generated.	Built
Home Screen Widget	Fast-track one-tap activation from the home screen without opening the app.	Coming Soon

"Buy a Coffee" Micro-Tipping	Peer-to-peer tips from saved driver to lookout. Platform takes small cut. Stripe-powered.	Coming Soon
Tesla Sentry Mode Integration	Parked Teslas act as passive always-on lookouts. Auto-triggers alert. Requires Tesla partnership.	Future
Warden Heatmaps	Historical data visualised — where wardens are most active by time of day and area.	Future
B2B Fleet Accounts	Company-level accounts for trade firms with multiple drivers. Fleet dashboard, bulk billing.	Future

Business Model & Pricing

Subscription Tiers

TIER	PRICE	ACTIVATIONS	ADS	EXTRAS
Free	£0	Unlimited	Yes — interstitial on each activation	Full core features
Basic	£2.99 / month	8 / month	None	Ad-free experience
Pro	£5.99 / month	20 / month	None	Priority alerts, advanced activity stats
Unlimited	£15.99 / month	Unlimited	None	Pro + B2B fleet features (coming soon)

Revenue Streams

- **Subscription fees** — recurring monthly revenue from Basic, Pro, and Unlimited tiers. The primary revenue engine.
- **Ad revenue** — Google AdMob interstitial ads shown to free tier users on each activation. Scales directly with user numbers.
- **Micro-tipping** — "Buy a coffee" peer-to-peer payments. Platform takes a percentage cut of each transaction.
- **B2B fleet accounts** — company-level subscriptions for trade firms with multiple drivers. Higher ARPU, lower churn.
- **Future: data partnerships** — anonymised aggregate warden activity data has commercial value to fleet operators, insurers, and local authorities.

The Free Tier Strategy

The free tier is not a concession — it is a deliberate growth mechanism. A fully-featured free tier with ads drives user volume, which drives network density, which makes the product work better, which drives paid conversion. The ad revenue from free users partially offsets infrastructure costs while the subscriber base grows. This is the same flywheel used by Spotify, Duolingo, and Waze.

PHASE 2

Route to Market — Marketing Strategy

Double Yellow launches in London. Not all of London — one borough at a time, with a laser focus on geographic density before breadth. The target at launch is not a million users. It is 300 active users within a single square mile. That is enough to make the product genuinely useful — and once it is useful, it grows itself.

Target Audience — In Order of Priority

PRIORITY	SEGMENT	WHY FIRST	HOW TO REACH
1	Tradespeople (plumbers, electricians, builders, carpenters)	Park out of necessity. Immediate financial ROI. Tight communities with strong word-of-mouth.	Facebook groups, Fix Radio, Scaff Mag, Checkatrade / MyBuilder outreach, Reddit r/plumbing r/electricians
2	Delivery Drivers (couriers, van drivers, last-mile)	High daily frequency. Large organised communities. Every fine hurts earnings directly.	Amazon Flex UK, Evri Couriers Facebook groups, gig economy forums, TikTok delivery driver content
3	Healthcare Workers (NHS staff, GPs, community nurses)	Sympathetic use case with high public support. Large organised workforce.	GMB, UNISON, RCN union channels, NHS staff networks, trust intranets, healthcare press
4	Urban General Public (commuters, city dwellers)	Once critical mass in an area is achieved, the product works for everyone.	TikTok / Instagram organic content, local press, word of mouth from segments 1–3

The Marketing Angle

- **Lead with emotion** — universal loathing of parking wardens. This is not a niche grievance. Everyone has felt it.
- **Community fighting back** — not an app for individuals but a movement. The name Double Yellow is the enemy turned into the brand.
- **Financial angle for trades** — position as a professional tool that saves money. One avoided fine per month pays for Pro.

- **Viral content opportunity** — parking warden encounters are highly shareable. TikTok and Instagram Reels of "warden spotted, car moved in time" are organic content gold.
- **PR hook** — "App helps tradespeople fight back against parking wardens" writes itself. Trade press, local news, national tabloids.

The Founding Member Programme

The first 500 users to download and activate the app receive **one year of Pro free**. In exchange, we ask them to be vocal — share on social, tell their workmates, report every warden they see. These 500 become the seeding layer for London, and their activity data is what makes the product compelling for the next 5,000.

This is not charity — it is infrastructure spend. The cost is $500 \times £5.99 \times 12 = £35,940$ in forgone revenue, in exchange for a self-seeding launch network.

Campaign Phases

PRE-LAUNCH

Months -3 to 0

- Build social presence: Instagram, TikTok, Reddit account. Start posting parking warden content to build audience before launch.
 - Create a waitlist landing page. Founding Member offer prominently featured — first 500 get a year free.
 - Identify top 20 London trades Facebook groups and build relationships. Don't spam — participate genuinely.
 - Reach out to Fix Radio, VanFleetWorld, Scaff Magazine, and Checkatrade with the story and early access.
 - Brief a small handful of tradespeople in East London for beta testing and founding member seeding.
-

LAUNCH

Months 0–3

- Geographic focus: East London (Hackney, Tower Hamlets, Islington). High warden density, high trades activity.
 - Founding Member campaign: 500 free Pro year offered to the first wave, seeded through trades communities.
 - TikTok / Instagram content push: real-world clips, "I just saved someone's car" moments, the gamification reward loop.
 - Press outreach: pitch the "community fights back" story to trade press and local London titles.
 - Personal outreach in trades WhatsApp groups and Facebook pages. Founders are on the ground, not behind a desk.
-

GROWTH

Months 3–12

- Expand borough by borough within London as density allows — data shows us where coverage is building.
 - Activate healthcare outreach: contact GMB, UNISON, and RCN union communications teams with partnership pitch.
 - Delivery driver communities: approach Evri Couriers UK Facebook group admins and Amazon Flex forums.
 - Referral scheme: existing users earn bonus points for every new user they bring in who reports a warden.
 - Partnerships: open conversations with Checkatrade and MyBuilder about integration or co-promotion.
-

- With investment: deploy paid Meta and TikTok ads targeted by profession and London postcode.

SCALE

Year 2+

- Roll out to Manchester, Birmingham, Leeds, Glasgow — cities with high trades density and active parking enforcement.
 - B2B fleet pitch: approach trade companies with 5+ employees. Fleet plan significantly increases ARPU.
 - National press push: the data we've collected by now (wardens spotted, saves confirmed, fines avoided) is itself a news story.
 - International scoping: the parking enforcement problem exists in every major European and Australian city.
 - App Store featured placement: a strong review count and engagement metrics make editorial featuring viable.
-

Critical Mass — The Plan to Get There

The critical mass challenge is real and it is the most common question this product will face. An app that alerts you to wardens is only useful if there are enough people nearby spotting wardens. This is the chicken-and-egg problem. Here is how we crack it.

What "Critical Mass" Actually Means

Critical mass for Double Yellow is not national. It is local. **200–300 active users within a single square mile** is enough to provide meaningful coverage — the statistical likelihood that someone is within a few hundred metres of any given warden becomes high enough to be genuinely useful. This is achievable in a dense urban environment like East London with a focused founding member seeding strategy.

The Five Tactics to Crack the Chicken and Egg

1. Geographic Focus

Don't try to cover all of London. Pick one postcode cluster, flood it with founding members, prove the product works there. Then expand. One working square mile beats a broken city.

2. Founding Member Programme

The first 500 users get a year of Pro free in exchange for active reporting. These are not passive users — they are the seeding layer. Their job is to report every warden they see, every day, for the first year.

3. Gamification as Engagement Engine

Points, leaderboards, and streaks make reporting feel rewarding even when no one is receiving the alert. The lookout earns points regardless. This means users stay engaged before critical mass is reached — and their reports build the density that creates critical mass.

4. Historical Heatmap (Coming Soon)

Even before critical mass, historical warden activity data becomes a product in itself. "Wardens are most active on this street between 9–11am on Tuesdays" is valuable information that makes

the app useful even with zero live reports.

5. Asymmetric Seeding — Trades First

Tradespeople in London are concentrated in specific areas — they travel to job sites in the same neighbourhoods day after day. Seeding just 50 active tradespeople in Hackney provides repeating, high-frequency coverage of a small area — the fastest path to local critical mass.

Critical mass is not a national problem — it is a street-level problem. Win the street. Then win the postcode. Then win the city.

PHASE 4

Revenue Model & Growth Trajectory

Full market sizing, penetration analysis, and per-segment revenue projections are detailed in the accompanying Double Yellow Market Research Report. The summary below captures the key numbers for this document.

Core Addressable Market (Three Professional Segments)

SEGMENT	MARKET SIZE	ANNUAL FINES BURDEN	BLENDED ARPU
Tradespeople	2,000,000	£119M/year	£64.08/year
Healthcare Workers	700,000	£70M+ in fees & fines	£64.08/year
Delivery Drivers	300,000	Share of £4.8M/day UK total	£64.08/year
TOTAL CORE MARKET	3,000,000	—	£64.08/year (blended)

Three-Year Revenue Roadmap

YEAR	PHASE	PAID SUBSCRIBERS	ANNUAL REVENUE	KEY DRIVER
Year 1	Launch & Seed	5,000–15,000	£320K–£965K	London trades community seeding; founding member programme
Year 2	Scale	50,000–150,000	£3.2M–£9.6M	Multi-city expansion; healthcare & delivery outreach; B2B fleet pilot
Year 3	Dominance	300,000+	£19.3M+	10% of core market; B2B fleet revenue; international scoping

At 10% penetration of the core professional market — before the general public, B2B fleet accounts, or international expansion — Double Yellow generates over £19 million in annual recurring revenue.

PHASE 5

Visual Identity & Design Language

Road signage. Bold. Brutal. British. The entire visual language is borrowed from the road — the thing every user of this app understands instinctively. No fuss, no gradients, no trendy soft UI. Just the bold, authoritative simplicity of the signs and markings that govern our streets — turned against the people who enforce them.

Colour Palette

COLOUR	HEX	USE	MEANING
Black	#0D0D0D	Background, road surface	The road itself — the home of the app
Yellow	#FFD700	Primary UI, core buttons	The double yellow lines — the whole reason we're here
Red	#E63946	Active / alert state	Warning, danger, warden incoming
White	#FFFFFF	Typography, secondary elements	Road markings, sign text — clean and readable

App Icon

Black (#0D0D0D) background. "DY" monogram in yellow (#FFD700) using Lato Black — bold, condensed, impossible to misread at any size. Two equal-width yellow horizontal lines at the bottom of the icon — actual double yellow lines. The icon is the brand in miniature.

Tone of Voice

- Short. Direct. No waffle. Like a road sign.
- A little bit cheeky — this is a rebellious app.
- Never corporate, never overly polished.
- "Warden incoming. Move it." / "Nice one. Community hero." / "Someone just saved your bacon."

North Star

If the app were a physical object it would be a road sign — not a smartphone app. Every design decision should be held up against that standard. If it looks like it could be on any other app, scrap it and make it look more like a road.

PHASE 6

Tech Stack

Double Yellow is built on a lean, modern, and highly scalable technology foundation. Every technology choice was made for speed of development, reliability at scale, and minimisation of infrastructure cost at early stage.

Technology Summary

LAYER	TECHNOLOGY	PURPOSE
Mobile App	React Native + Expo SDK 54	Single codebase for iOS and Android
Auth	Supabase Auth	Email/password, Apple Sign In, Google Sign In
Database	Supabase PostgreSQL	Users, activations, reports, alerts, transactions, subscriptions
Real-Time Alerts	Supabase Realtime + Geohashing	Websocket alert broadcasting via geohash grid cells
Location	Expo Location + Geofencing	Background GPS, park location logging, return detection
Push Notifications	FCM (Android) + APNs (iOS)	Custom siren tone, volume override, locked-screen delivery
AI Verification	Google Vision API	Warden photo classification — uniform / enforcement equipment detection
Advertising	Google AdMob	Interstitial ads on activation for free tier users
Payments	Stripe + RevenueCat	Subscriptions, Apple/Google IAP, peer-to-peer tipping
Edge Functions	Supabase Edge Functions (Deno)	Radius calculations, alert broadcasting, Vision API calls, points logic
App Distribution	Expo EAS Build	Cloud builds, OTA updates, App Store and Google Play submission
Analytics	PostHog + Sentry	Product analytics, funnel tracking, error monitoring, crash reporting

Why This Stack

- **React Native + Expo:** One codebase, two platforms. Faster development, lower cost, consistent experience. Used by Shopify, Discord, and countless successful consumer apps.

- **Supabase:** PostgreSQL at its core — battle-tested, GDPR-compliant, with built-in realtime, auth, and storage. Scales from zero to millions of users without a rewrite.
- **Geohashing:** The real-time alert system divides the world into invisible grid squares. Activating subscribes you to nearby cells. Warden reported — every affected cell is notified instantly. Elegant, fast, and infinitely scalable.
- **No unnecessary complexity:** Every tool in this stack does exactly one job well. No over-engineering, no vendor lock-in beyond what is unavoidable.

PHASE 7

What's Next — Product Roadmap

The MVP is built and launch-ready. The following represents the product roadmap post-launch — features ordered by user impact and strategic value.

FEATURE	DETAIL	STATUS
Home Screen Widget	One-tap activation without opening the app. iOS WidgetKit + Android widget. Three states: Inactive / Active / Alert.	Coming Soon
"Buy a Coffee" Tipping	Saved driver thanks the lookout with a micro-payment. Platform takes a percentage. Stripe Connect peer-to-peer.	Coming Soon
Warden Heatmaps	Historical warden activity visualised on map by time and area. Useful even with zero live reports — adds standalone value.	Coming Soon
B2B Fleet Accounts	Company accounts for trade firms. Fleet dashboard, per-driver reporting, bulk billing. Significantly increases ARPU.	Coming Soon
Referral System	Invite a tradesperson, earn bonus points. Organic growth mechanic with zero cost.	Coming Soon
SMS Alert Fallback	SMS notification for users in areas with patchy internet. Critical for reliability in coverage edge cases.	Coming Soon
Warden Direction of Travel	Lookout indicates which way the warden is walking. Parked users know if the warden is heading towards them.	Coming Soon
"Did You Escape?" Outcome Prompt	On return to car, app asks: did you get away with it? Yes / No / Not sure. Feeds gamification data and product analytics.	Coming Soon
Tesla Sentry Mode Integration	Parked Teslas act as passive always-on lookouts. Auto-trigger alert if warden detected by Sentry camera. Requires Tesla API partnership.	Future
Dashcam Integration	Expand Tesla concept to other dashcam manufacturers. Passive, always-on coverage network.	Future
International Expansion	Architecture is geography-agnostic. Launch in Dublin, Sydney, Amsterdam — any city with active parking enforcement.	Future

Double Yellow — Product Bible v2.0 — March 2026 — Confidential
